Northern Airborne Technology Ltd.

Information Release

DATE: April 22, 1991	SUBJECT: Schematic Drawings for AA90/AMS40 Controllers
ISSUE: 1	DOCUMENT(S) EFFECTED: AA90/AMS40 Series Service Mnl

GENERAL:

Due to the number of audio controllers produced by Northern Airborne, many of them customized, it is not practical to publish all of the associated drawings that are generated for each model. It should be noted that most of the customized audio controllers (those with -400/-500/-700 part numbers) are all built around the features of the AMS43. The customized units differ in the name and number of the receiver/transmitter functions, number of users, and the type of special features such as ALERTING.

In the event that maintenance or repairs need to be carried out on a particular audio controller, and the specific schematic drawing is not available, the AMS43 schematic can be used for reference. The repair technician should compare the features and circuitry of the unit he/she is working on, to those illustrated on the AMS43 schematic.
